

Endell Veterinary Group

Flock Health Initiative

Unlike the situation within the dairy and beef sectors of our practice, we have long been aware that our involvement in proactive flock health planning with our sheep clients has been limited, yet we are also aware that a strategic approach to health management and preventative medicine can generate a return many times the input cost. This initiative is aimed at addressing this situation by offering our sheep clients what we believe will be a cost effective approach to flock health planning to the benefit of all concerned; you, us and, perhaps most importantly, your sheep.

You can choose to enrol your flock on either Level 1 or Level 2 of the scheme. Depending on which you choose, we will provide:

Level 1

- Maintenance of a flock health plan with advice about health screening and preventative medicine.
- Data collection and benchmarking to highlight strengths and weaknesses.
- Sponsored meetings for members twice a year to discuss particularly tupping performance, lambing performance, parasite control and other topical issues.
- Access to specially negotiated deals on medicines.

Level 2

- All of Level 1.
- Veterinary visits before tupping and lambing each year to assess and discuss flock health (to include subsidised laboratory fees for, for example, infectious disease screening and metabolic profiling).
- Subsidised faecal worm egg counting with advice about when and how this should be done.

The cost of this will depend on the level of service chosen and the size of your flock:

Level 1: **£20.00 + VAT/Month**

Level 2:

Less than 300 ewes **£40.00 + VAT/Month**

300 to 1000 ewes **£50.00 + VAT/Month**

More than 1000 ewes **£60.00 + VAT/Month**

Other visits will, of course, be available as required for scheme members and non-members alike as they are now.
